CLAIMS

What is claimed is:

- A method of using vitamin E, vitamin C and a carotenoid in the manufacture of a foodstuff for reducing nucleic acid damage in a companion animal.
- 2. The method of claim 1, further including taurine.
- The method of claim 1, wherein the carotenoid is one or more of beta-carotene, lutein or lycopene.
- 4. The method of claim 1, wherein the vitamin E is present at a concentration of from 25IU/400kcal diet or above.
- The method of claim 1, wherein the vitamin C is present at a concentration of from 10mg/400kcal or above.
- The method of claim 1, wherein the carotenoid is present at a concentration of from 0.01mg/400kcal or above.
- The method of claim 2, wherein the taurine is present at a concentration of from 80mg/400kcal or above.
- The method of claim 1, wherein the foodstuff is selected from a
 group consisting of dry, wet, and semi-dry foodstuff and a
 supplement.
- The method of claim 1, wherein the companion animal is selected from a group consisting of a cat, dog, horse, fish, bird, rabbit and guinea pig.
- A process for reducing nucleic acid damage in a companion animal comprising the step of feeding the companion animal a foodstuff containing vitamin E, vitamin C and a carotenoid.

- The process of claim 10, wherein the nucleic acid damage is DNA damage.
- 12. The process of claim 10, wherein the foodstuff further contains taurine
- The process of claim 10, wherein the carotenoid is one or more of beta-carotene, lutein or lycopene.
- The process of claim 10, wherein vitamin E is present at a concentration of from 25IU/400kcal diet or above.
- The process of claim 10, wherein vitamin C is present at a concentration of from 10mg/400kcal or above.
- The process of claim 10, wherein carotenoid is present at a concentration of from 0.01mg/400kcal or above.
- 17. The process of claim 12, wherein taurine is present at a concentration of from 80mg/400kcal or above.
- The process of claim 10, wherein the components are administered simultaneously, separately or sequentially.
- The process of claim 10, wherein the companion animal is selected from a group consisting of a cat, dog, horse, fish, bird, rabbit and guinea pig.
- A foodstuff for reducing nucleic acid damage in a companion animal, the foodstuff comprising a foodstuff composition containing vitamin E, vitamin C and a carotenoid.
- 21. The foodstuff of claim 20 further containing taurine.
- The foodstuff of claim 20, wherein the carotenoid is one or more of beta-carotene, lutein or lycopene.

- The foodstuff of claim 20, wherein the vitamin E is present at a concentration of from 25IU/400kcal diet or above.
- The foodstuff of claim 20, wherein the vitamin C is present at a concentration of from 10mg/400kcal or above.
- 25. The foodstuff of claim 20, wherein the carotenoid is present at a concentration of from 0.01mg/400kcal or above.
- The foodstuff of claim 21, wherein the taurine is present at a concentration of from 80mg/400kcal or above.
- The foodstuff of claim 20 wherein the foodstuff is selected from a group consisting of dry, wet, and semi-dry foodstuff and a supplement.
- The foodstuff of claim 20, wherein the companion animal is selected from a group consisting of a cat, dog, horse, fish, bird, rabbit and guinea pig.
